IMPROVES HAND - HYGIENE COMPLIANCE
REDUCING INFECTION RATES

The
how
in hand
hygiene

The number of people dying worldwide from preventable Hospital Acquired Infections (HAI) is comparable to a 747 aircraft full of passengers crashing every day according to the World Health Organisation (WHO).

The Centres for Disease Control (CDC) in the USA have estimated that 100,000 people die in the US each year from infections they acquire in hospitals and estimate the cost of treating these infections at up to \$45Bn per year.

“Healthcare workers hands are the most common vehicle for the transmission of healthcare associated pathogens from patient to patient and within the healthcare environment”

WHO, Geneva, Switzerland.

WHO analysis has shown that there is on average 38% compliance with hand-hygiene guidelines.

SureWash usage on a surgical ward in the NHS resulted in a 700% increase in hand-hygiene compliance, with hand-hygiene compliance. (data presented at ICPIC, Geneva, July 2011).

SureWash improves hand-hygiene compliance, reducing infection rates.

surewash TRAINING

SUMMARY

SureWash is a mobile hand-hygiene training and assessment unit, for use on the ward.

Uses camera, video and graphics to deliver hand-hygiene training and assessment in line with WHO's hand-hygiene protocol.

Provides regular hand-hygiene training to healthcare workers.

Enables all healthcare workers to receive hand-hygiene training.

Measures performance and provides real-time feedback to staff.

Located on the ward, so reminds staff to refresh their hand-hygiene training.

Helps build and maintain an institutional culture of patient safety.

Retains full training records which can demonstrate to international certification bodies such as Joint Commission International (JCI) and Local Healthcare Authorities that staff have achieved a verifiable competence in hand-hygiene technique, advocated by the WHO.

SUREWASH IMPROVES HAND-HYGIENE COMPLIANCE
REDUCING INFECTION RATES

surewash

Winner of an Innovation Academy award at the International Conference on Prevention and Infection Control in Geneva in 2011.

surewash TRAINING

HOW IT WORKS

SureWash training delivers your tailored hand-hygiene training. The training includes an overview of the importance of hand-hygiene, gives pose by pose instruction and assessment and finally an assessment of the complete hand-hygiene event.

Training and result records are retained for records and audit purposes.

SureWash training takes approximately 4 minutes, and can be done any time, 24/7, without leaving the ward.

Pose by pose instruction and training includes pose demonstration, progress bar while staff member completes the pose and feedback where the pose is not completed in line with protocol.

Assessment uses camera technology. The camera at the top of the unit sees what the staff member's hands are doing. **SureWash** analyses this and compares it to the WHO hand-hygiene protocol. Assessment and feed-back is given to the user in real time on the screen. The user sees a progress bar and is given instruction if their hand-hygiene procedure is not in line with the defined protocol.

EVIDENCE FOR SUREWASH TRAINING

SureWash saves time:

- * Operates 24/7, matching staff rosters and ensuring all staff have the opportunity to train
- * Allows staff to train frequently and independently
- * Staff complete hand-hygiene training on the ward
- * Automatically generates full training records

SureWash saves money:

- * Can be moved around the hospital reaching all staff
- * Frees infection control staff for other tasks
- * Training frequency is increased

"**SureWash** training needed no explanation and staff used it unprompted ... 61 staff used it on the Cardiac ward over a weekend." Ann Higgins, Assistant Director of Nursing, Infection Control, Mater Private Hospital, Dublin Higgins (Higgins 2011) used ATP testing to show that only 30% of staff were adequately cleaning their fingertips and between their fingers - subsequent training on hand-hygiene technique improved effectiveness. Conrad [Conrad 2010] reported that hand-hygiene campaigns consisting of short training sessions on the ward were effective in reducing infection rates.

surewash

Quality hand hygiene rests on three pillars: quality product, correct timing and quality application through technique.

SureWash now offers healthcare facilities the ability to promote a uniform hand hygiene technique among all staff. Using gesture recognition technology SureWash develops muscle memory, which in turn delivers a standard technique used subconsciously when applying soap or alcohol gel.

The technique learnt through SureWash is that advocated by the WHO* and the CDC**. While allowing for anonymous training SureWash also has the ability to report, in detail, on all activity on the system.

For the first time hand hygiene does not require supervised training: **SureWash** operates on the ward, delivering real-time feedback and providing an active learning experience

SureWash reports show in detail the training effort and competency of staff in their hand hygiene technique. Comparable for wards, hospitals or groups, for the first time hand hygiene is measured objectively. "We can only improve what we can measure."

Improve the hand hygiene in your hospital today with SureWash.

- Minimise variation in hand hygiene technique
- Increase the predictability of outcome of hand hygiene events
- Improve efficiency of staff through acquired muscle memory
